

Limelight Pre & Post Care Instructions

For best results, please follow these instructions:

Before your treatment:

- 1. IMPORTANT- USE OF ANTIBIOTICS - Before each treatment, please inform us if you are taking any new antibiotics or medications as they may make your skin photosensitive and likely to burn or blister. If this is the case, we may not be able to treat you for one to two weeks after completion of the medication.**
- 2. If possible, please do not wear makeup to your treatment if this is the area being treated.**
- 3. Avoid any irritants to your skin, such as any products containing Retin-A, retinol, benzoyl peroxide, glycolic/salicylic acids, astringents or Vitamin C for one week before your treatment.**
- 4. Do not wax or use a depilatory on treatment areas for one week prior to your treatment.**

After your IPL treatment:

- 1. Avoid sun exposure and tanning beds to treated areas after treatment (we recommend this indefinitely). Daily sunscreen with an SPF of at least 30 is vital to help maintain your improved skin.**
- 2. Avoid any irritants to your skin, such as any products containing Retin-A, retinol, benzoyl peroxide, glycolic & salicylic acids, astringents or Vitamin C for one week after your treatment.**
- 3. Do not wax, tweeze or use a depilatory to the treated areas for 1 week after your treatment.**
- 4. Treated lentigines usually darken after treatment and flaking/crusting begins to form within a few days. This flaking/crusting usually resolves in 1 to 3 weeks. It should be allowed to naturally flake off.**
- 5. If significant crusting occurs beyond the normal flaking of the treated lesions, an antibiotic ointment such as Polysporin or Bacitracin may be recommended.**
- 6. Localized redness may be present and typically resolves within 24 to 48 hours.**
- 7. It is best to avoid wearing make up until the next day.**
